PROJECTS

1. FOS

Role: Frontend Developer

Technologies Used: React.js, RESTful APIs

- Role-Based Implementation: Developed a robust role-based access control system to manage user permissions effectively, ensuring that users could only access features relevant to their roles.
- User Approval Workflow: Developed a hierarchical approval system for user requests, such as leave actions and edits, ensuring streamlined and secure processing of approvals.
- Frontend Enhancements: Improved the existing website's front-end using React class components, enhancing user experience and site performance.

2. XTRAPP

Role: Full Stack Developer

Technologies Used: Next.js, React.js

- Official Website Development: Designed and built the company's official website using Next.js, focusing on performance, SEO optimization, and responsive design.
- Dashboard Implementation: Created a comprehensive dashboard for user management, including role-based functionality for single and multiple user role edits, deletions, and updates.
- Approval Workflow: Developed a hierarchical approval system for staff actions, ensuring that changes and updates followed the correct managerial approval process.

3. Zapier Integration Project

Role: Integration Specialist

Technologies Used: Zapier, Google Forms, MS Excel, Google Sheets, Slack

- Google Form Integration: Set up a seamless integration between Google Forms and various other tools using Zapier, automating data collection and processing workflows.
- Data Storage Automation: Configured automatic data storage in MS Excel and Google Sheets whenever a form was submitted, enhancing data management efficiency.
- Alert System: Developed a real-time alert system in Slack, notifying relevant stakeholders of new form submissions to ensure prompt action and communication.
